

Supplementary Figure 2 Overlaps of exon types for exonic UCEs. Fraction of all mRNAs (left) and exonic portions of UCEs (right) that overlap 5' UTRs, 3' UTRs and/or internal exons. Dashed circles represent cassette exons. Intersections combined constitute 22% of all mRNA sequences and 46% of exonic ultraconserved sequences. Data underlying this figure and further discussion are given in Supplementary Table 2.
